

A Evidence read for the query $(s, r, ?, t)$

support $S(q)$: partners of s and past objects of (s, a)

dyad streams, most recent first; token = (typed relation, elapsed time)

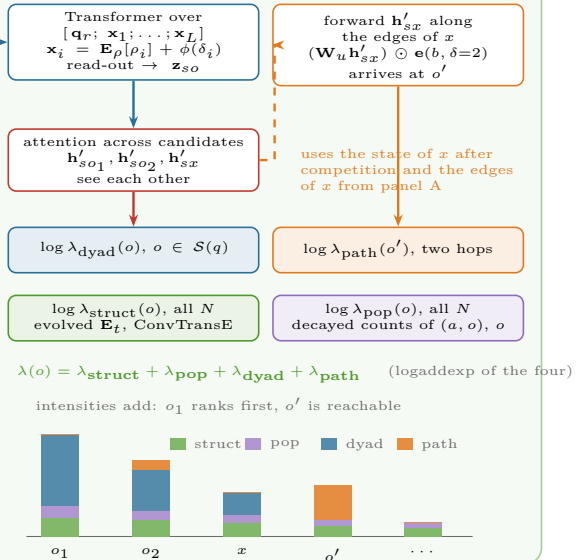

o' never interacted with s :
no dyad stream, reached only
through x

+ eight statistics per candidate (counts, recency, mean gap of the triple and of the dyad)

+ each candidate's own P_2 most recent typed edges, e.g. $x \xrightarrow{b} o'$ at $t-2$

B Intensities and their superposition

relation types: a consult, b make visit, c criticize; dashed = inverse direction; grey edges = other relations; $\bullet$ query subject, $\bullet$ answer, $\bullet$ other partners, $\bullet$ entity reached only by a path
