

A Evidence read for the query $(s, r, ?, t)$

$t - 3$

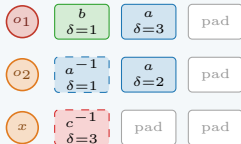

$t - 2$

$t - 1$

support $\mathcal{S}(q)$: partners of s and past objects of (s, a)

dyad streams, most recent first; token = (typed relation, elapsed time)

o' never interacted with s :
no dyad stream, reached only
through x

+ eight statistics per candidate (counts, recency, mean gap of the triple and o

+ each candidate's own P_2 most recent typed edges, e.g. $x \xrightarrow{b} o'$ at $t - 2$

relation types: a consult, b make visit, c criticize; dashed = inverse direction; $\bullet$ q
